Investing In The Nature Of Southwestern Illinois

Mapping Green Infrastructure

Sarah Vogt
Project Manager

What is HeartLands Conservancy?

Mission

Provide leadership and solutions to sustain and enrich the diverse environmental resources of Southwestern Illinois

Vision

Communities with healthy and sustainable air, land, and water resources for current and future generations.

- Founded in 1989
- 501(c)(3) nonprofit charitable organization
- Independent corporation

Investing In The Nature Of Southwestern Illinois

- 7 County Primary Service Area
- 2.5 million acres
- 670,000 residents
- 7,000 acres protected
- \$30 Million+ invested
- 9 Employees
- 28 years in operation

How are we funded?

Variety of Sources:

- Service Contracts with Local Government & Agencies
- Foundation, State, and Federal Grants
- Donations
- Corporate Sponsors
- Judgments/Settlements

How do we accomplish our mission?

Three Priorities

- Land Conservation
- Building Greener Communities
- Engaging People with Nature

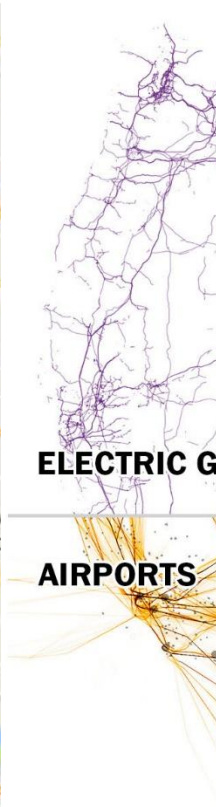

Floodplain

Trees

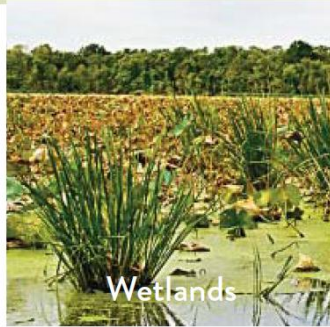

Farmland

ELECTRIC G

AIRPORTS

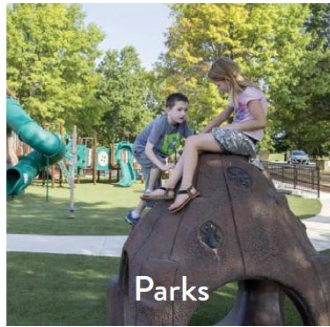

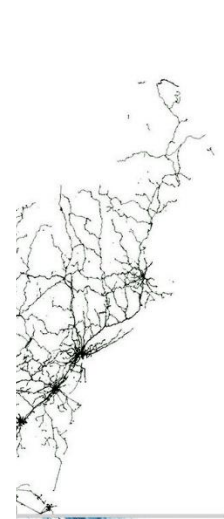

Wetlands

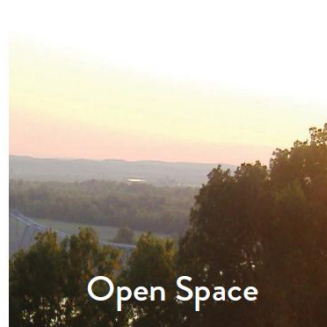

Natives

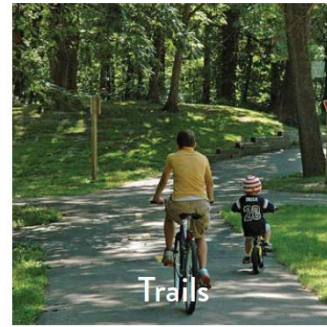

Prairies

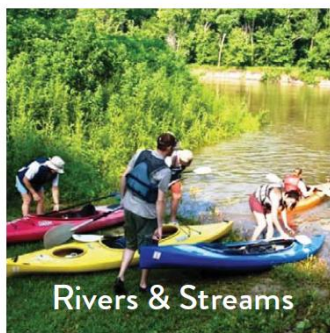

Parks

Open Space

Trails

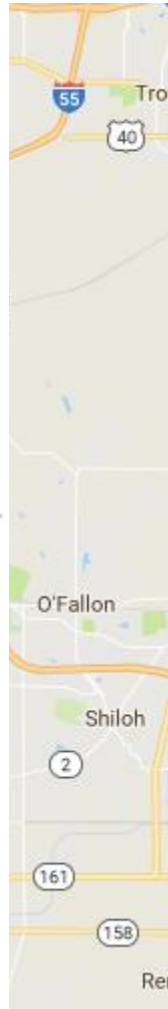

Rivers & Streams

Cultural Sites

Woodlands

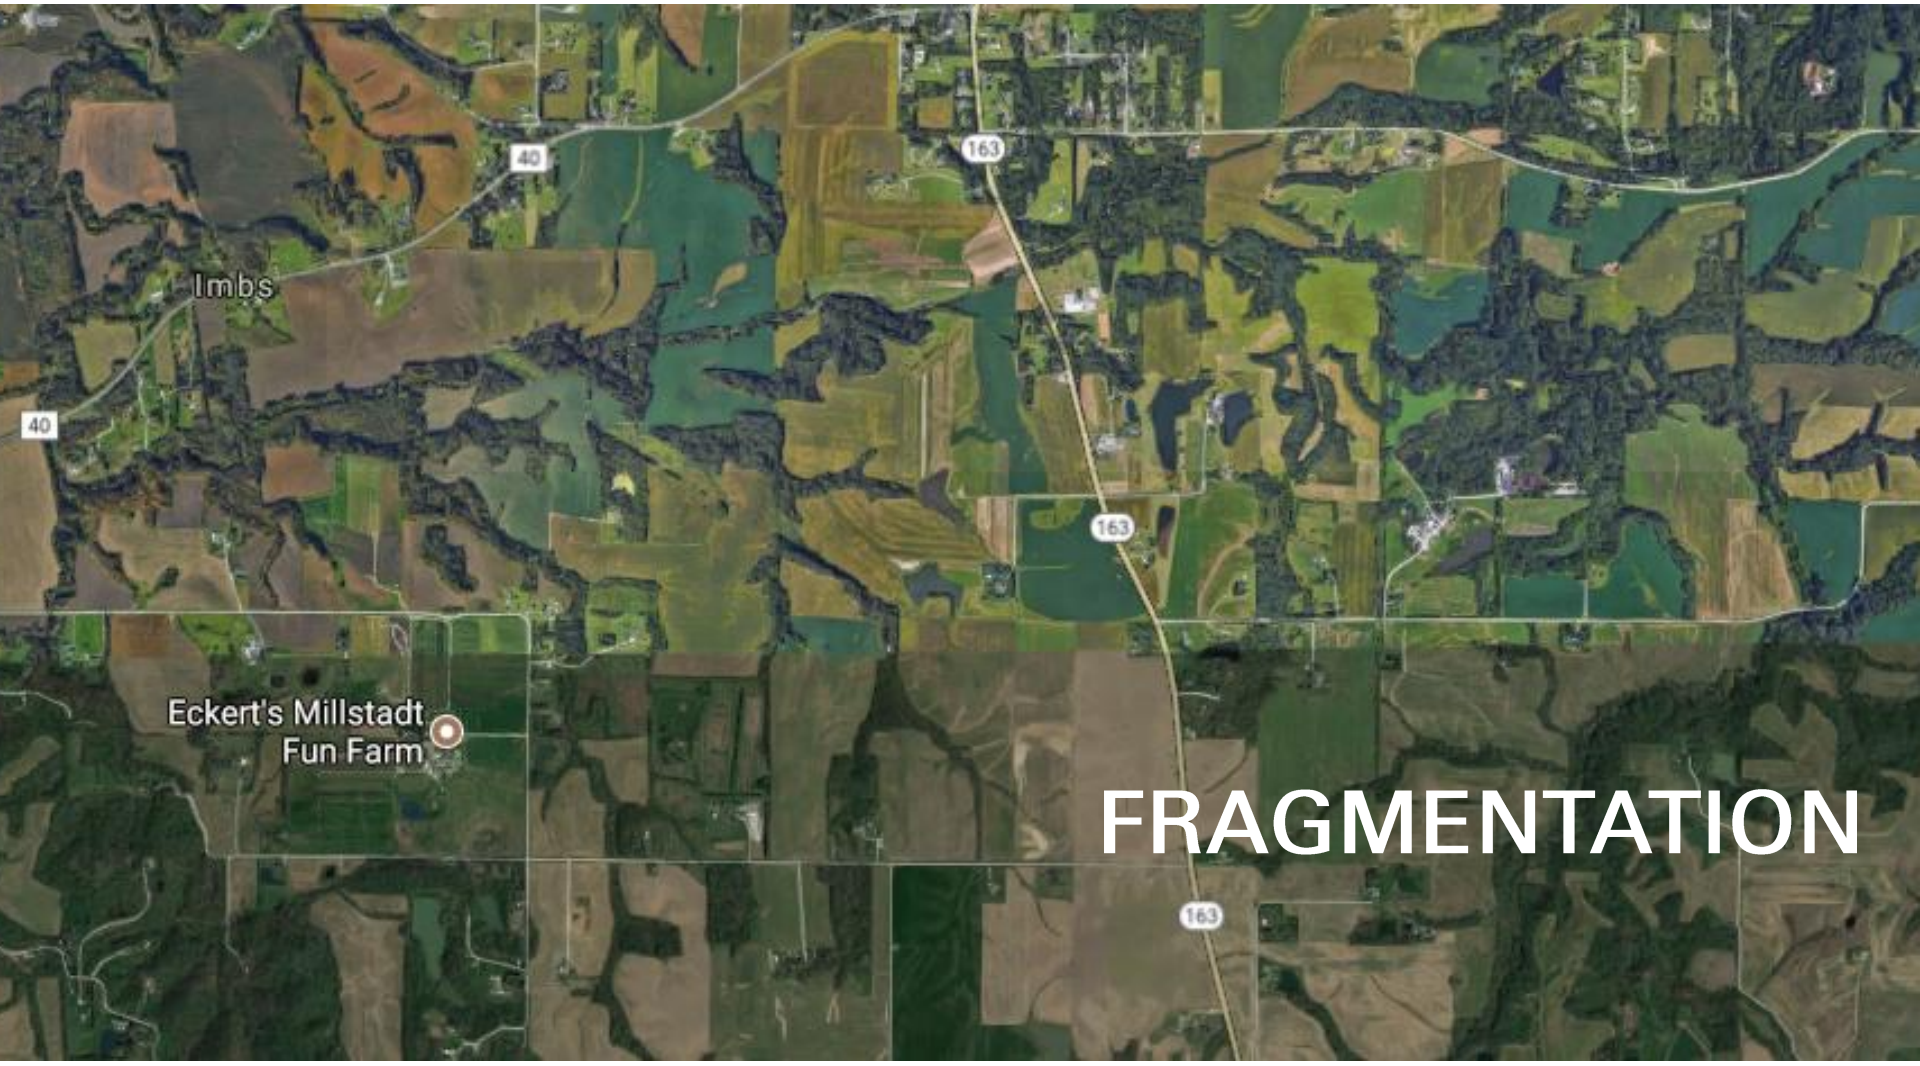

Green Infrastructure Framework

‘An interconnected network of natural areas and other open spaces that conserves natural ecosystem values and functions, sustains clean air and water, and provides a wide array of benefits to people and wildlife. In short-
Our *Natural* life-support system.’

Why is Green Infrastructure Important?

FRAGMENTATION

Why is Green Infrastructure Important?

Fragmentation

- Decreased Habitat
- Less diversity-rich and rare habitats
- Loss of corridors for large species travel
- Increased 'Edge Habitat'
 - Exotic/Invasive Species
 - Increased human interaction, vehicle crashes
 - Increased Spread of Pathogens

Why is Green Infrastructure Important?

Public Health Risks

- Degraded Air Quality
- Higher Humidity and Increase in Heat Wave Intensity/Frequency
- Degraded Water Quality

Why is Green Infrastructure Important?

Loss of Well Being

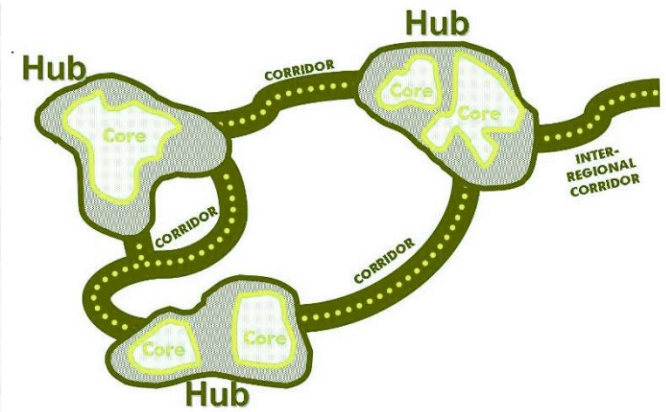

- Nature Deprivation
- Increase in obesity, cardiovascular disease, asthma, stress, depression
- Increase in pathogens , less resistance to pathogens

Green Infrastructure Framework for Southwestern Illinois

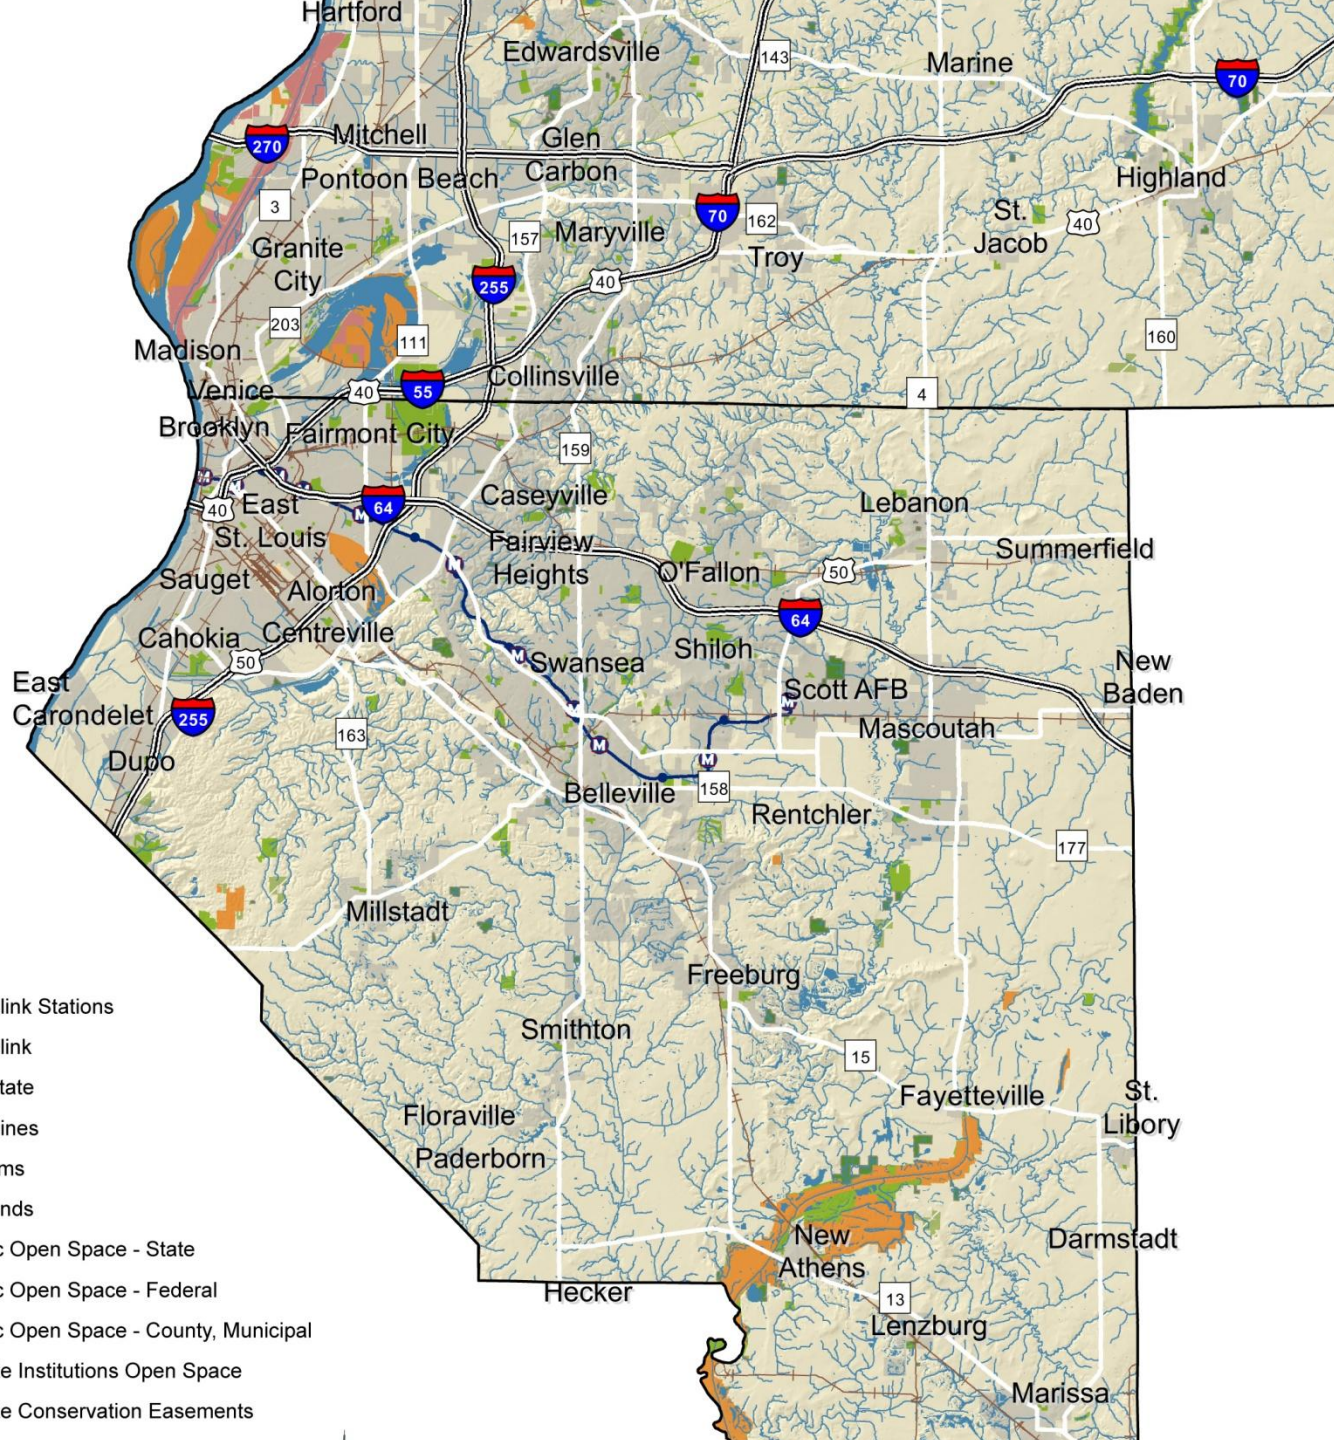

- Use GIS to analyze Land Use & Land Cover data in order to identify prime places for Hub and Corridor Connections for a Regional Green Infrastructure Plan.

Legend

-  Streams Buffer (Urban 50ft.; Non-Urban 100ft.)
-  Wetlands
-  Wetland Buffer (300 ft.)
-  Public Open Space - State
-  Public Open Space - Federal
-  Public Open Space - County, Municipal
-  Private Institutions Open Space

What's Next

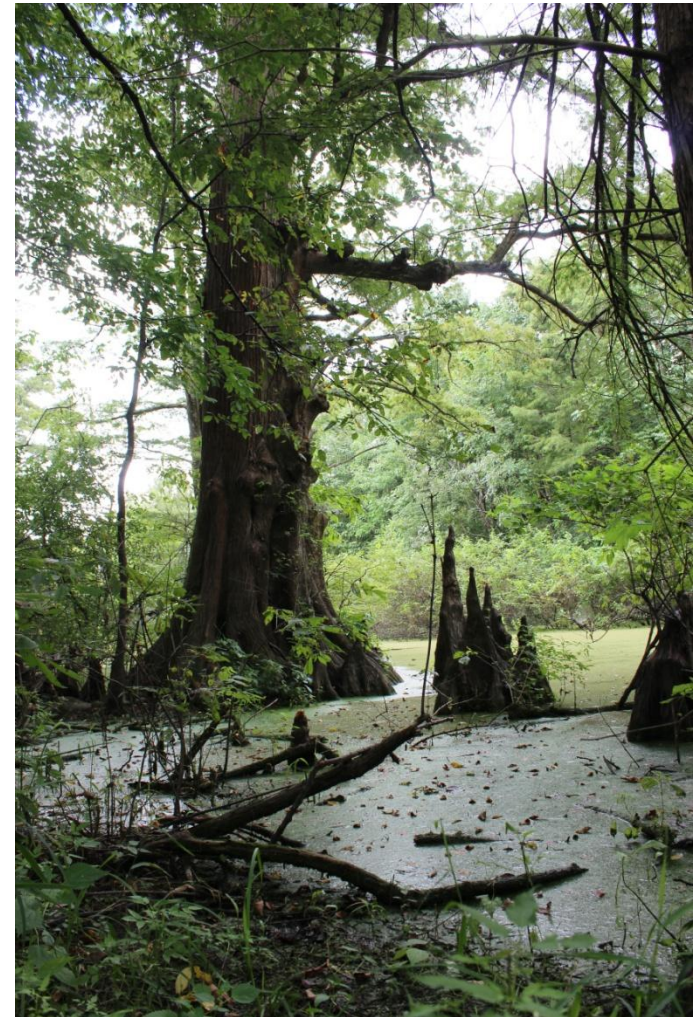

- Use new refined urban land use to establish identify connections through cities.
 - Urban Forestry Program
 - Work with local governments to move toward regional goals
 - Engage with landowners using various tools for land conservation.
-

TOOLS

- PURCHASE or DONATION (Fee-Simple Ownership)
 - High Quality Natural Areas
 - Park & Recreation
 - Stormwater
 - Donated lands that don't meet criteria above can be sold and funds received can be then be invested in conservation

TOOLS

- EASEMENTS
- Donated vs. Purchased
- 2 Types
 - Conservation Easement
 - Agricultural Easement

ADDITIONAL TOOLS

- STATE – IL Nature Preserves Commission
 - Nature Preserve
 - Land & Water Reserve
 - Natural Heritage Landmark
- FARM BILL PROGRAMS
 - Conservation Reserve Program
 - Wetland Reserve Program
 - Wildlife Habitat Incentives Program

ADDITIONAL TOOLS

- POLICY

- Conservation Overlay Districts / Conservation Subdivision
- Protection of riparian corridors, stormwater management, urban forests, etc.
- Environmental Mitigation

ADDITIONAL TOOLS

- PROGRAMS

- HeartLands' Lots of Love – converting vacant lots into habitats that will increase biodiversity and improve water quality for the community.

Outcomes

- Implementing this Plan in 2 counties would:
 - Protect & buffer 88,000 acres of core forest.
 - Create 3,200 acres of riparian corridor
 - 84,000 acres of wetland buffer
