

Inside & Outside a Building

The way we used to do things sometimes was more sustainable than current methods. Can you find an example of this at the *Tower Grove House*?

Do No Harm

Sustainability means we should leave natural resources intact for future generations. You might see a resource we use a lot of in the *English Wooded Garden* – trees! How can you use less tree products?

Sustainability is Common Sense

Sometimes less is more! Explore the themes of simplicity and wabi sabi in the *Japanese Garden*.

Sustainability is Common Sense

Explore the color and temperature of the roof of the *Piper Observatory*. Remembering that we have to cool our buildings in the summer time, what color do you think makes most sense for a roof?

Sustainability is Common Sense

The name of the artwork here is "*The Victory of Science over Ignorance*." What has your education taught you so far about our natural resources?

Do No Harm

In addition to leaving resources intact for humans to use, we want to make sure there's plenty left for other creatures too! What types of wildlife habitat do you see outside of the *Kemper Center for Home Gardening*?

Inside & Outside a Building

How many components of a green building can you find near the *Kemper Center*? Can you find examples of

- Renewable energy?
- Water conservation?
- Waste recycling?
- Local food production?

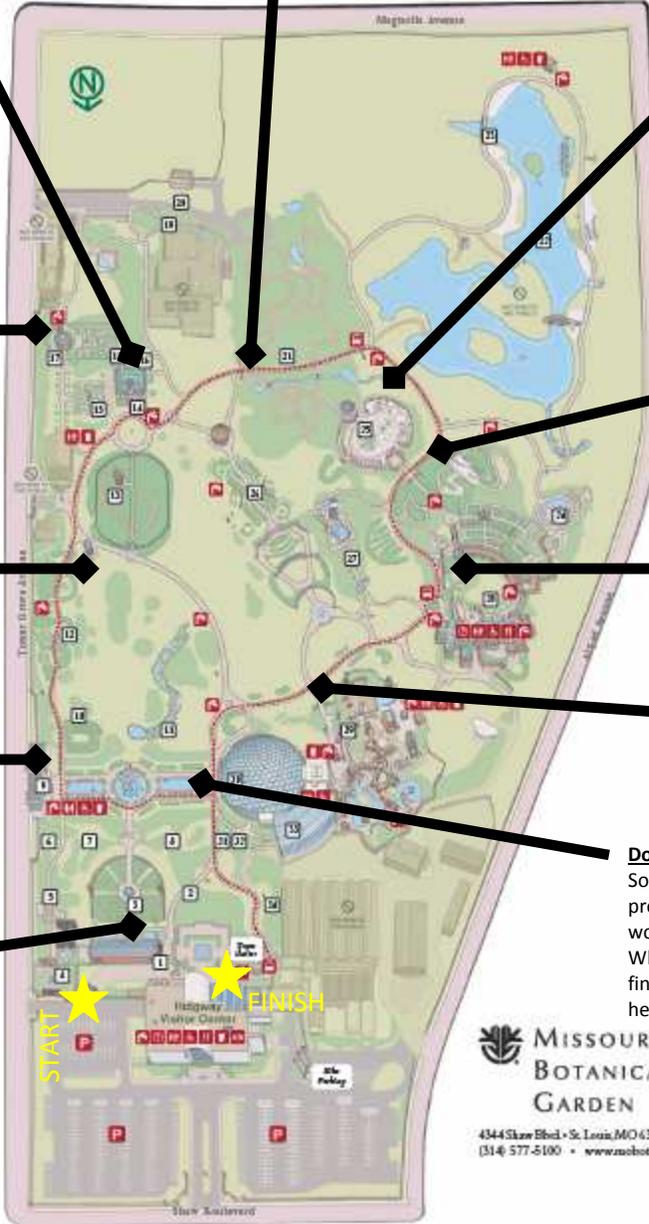

Sustainability is Common Sense

And it should be fun! While you're having a good time in the *Children's Garden*, see if you can spot the MBG compost pile!

Do No Harm

Some of our natural resources exist in protected & endangered parts of the world – like our coffee & bananas! What other kinds of resources can you find in the *Climatron*? Do they grow here in Missouri?

- Information
 - Restrooms
 - Family restroom
 - Accessible
 - Parking
 - Dining
 - Beverages
 - Drinking fountain
 - Outdoor (non-fire) drinking fountain has a 3-second delay. Please press and hold button to operate.

Within the St. Louis region, the Missouri Botanical Garden is currently one of a kind in educating and demonstrating sustainable life style choices—choices that minimize our current and future impact on plants, our local environment, and the world at large.

Plants and their ecosystems continue to be negatively impacted by human behaviors and choices related to the food we eat, the homes and buildings we construct and operate, the products we produce and consume, and the transportation methods we employ.

During your visit to the Garden, be sure to check out all of our sustainable features!
