

MOSQUITO-SAFE SAINT LOUIS COMMUNITY ACTION

Prevent mosquito bites

- Use an electric fan when sitting outdoors; the fan breeze will keep mosquitoes away as they are weak fliers - and you stay cool!
- Use US EPA approved mosquito repellants like DEET, catnip, lemon eucalyptus and citronella whichever works best for you.
- Wear loose, light colored clothing outdoors.
- Go fragrance-free during mosquito season.

Eliminate mosquito breeding sites

- Empty containers like buckets, plant saucers, pet bowls, and flowerpots weekly.
- Remove items that collect rainwater like tires, toys, and trash.
- Clean gutters and drains regularly to prevent standing water.
- Can't eliminate standing water? Use Mosquito Dunks! They kill mosquito larvae, but don't harm birds, pets, etc.

Use the app MOSQUITO ALERT

- Help track kinds of active mosquitoes.
- Contribute to public health efforts and help track & report local mosquito populations
- Photos of mosquito sightings, breeding sites, and bites will be reviewed by our team of entomologists
- Data will be shared with local health authorities
