Seasonal Snapshot

PROGRAM OVERVIEW

About the Program

Designed for students in Kindergarten through 2nd Grade, the Seasonal Snapshot program invites children to explore the changes in weather that characterize our four seasons, and the effects these changes have on plants, animals and our own activities. During this program, students will:

- Discuss the four seasons (spring, summer, autumn and winter), why they occur, and what behaviors and weather we associate with each.
- Participate in the creation of a changing story scene (shown above), during which a given landscape changes with the seasons.
- Explore the Linnaean House area in small groups led by one of our instructors to observe ways in which seasons impact the Missouri Botanical Garden’s collections, practices and scientific study.
- Plant a seed to take home or to the classroom to observe as it grows.

Phenology describes the study of life cycles and the timing of seasonal phenomena as they are observed throughout the year. Phenologists record the dates when flowers bloom, when trees produce their first spring leaves and turn color in the fall, the first sightings of migrating birds and insects, changes in plumage and behavior, and even the appearance of eggs and young. These data give scientists an idea of how year to year fluctuations in temperature and precipitation affect the plants and animals around us.

Phenology study is a great way to introduce observation and data collection to young students. Consider building upon the Seasonal Snapshot program by observing a tree or flowering plant in your school yard throughout the year.

Objectives

NGSS/MLS Standards for K-2:

PS3.A - Definitions of Energy
LS1.C - Organization for matter and energy flow in organisms
ESS1.B - Earth and the Solar System
ESS2.D - Weather and climate

For more information or to book this program, please visit https://www.missouribotanicalgarden.org/learn-discover/students-teachers/school-programs-and-field-trips or call the School Programs office at 314-577-5185.
This Program Features:
The Linnean House and Central Axis

The northeast region of the Missouri Botanical Garden includes the Linnaean House, the Gladney Rose Garden, the Ottoman Garden, the Sensory Garden, the Bulb Gardens, Hosta gardens and the Central Axis. (Please note that the Climatron™ Conservatory is not included in this program.) These regions were selected for short legs to highlight those areas that exhibit seasonal changes and offer opportunities to discuss the strategies and practices used to design gardens and protect the health of our plants throughout the year.

Other Places to Explore...

Make the most of your visit by taking your students to explore the following areas after your program:

1. **English woodland Garden** - Explore a maintained forest setting featuring trails, wildlife habitats, and seasonal understory plants. A great place to observe how different organisms adapt to the seasons.

2. **The Climatron Rainforest Conservatory** - Walk through a tropical rainforest in the Climatron™ conservatory, then explore the interactive exhibits in the Brookings Interpretive Center.

3. **The Kemper Center** - This 8-acre complex includes 23 demonstration gardens, including a vegetable garden, a bird garden, native gardens, gardens for butterflies and even a garden for children!

**Logistics for Teachers**
- Each Seasonal Snapshot program lasts 90 minutes and serves up to 60 students.
- Multiple programs may be booked across separate times & dates, pending availability.
- Program fees include admission for up to six adults per 30 students. (Additional adults will be charged normal admission rates.) Please try to bring at least one adult for every five students.
- Currently, no lunch space exists on Garden grounds and picnicking is prohibited. Please schedule your visit and mealtimes accordingly.
- Program availability is limited! Book early!
